

## Professional Summary

Pre-final year B.Tech Computer Science student at BIT Mesra with experience shipping full-stack applications, AI/ML systems . Built a multi-agent platform that cut procurement response time from 3 hours to 7 seconds. Seeking a software engineering, Python development, full stack or AI/ML internship for Summer 2026.

## Education

Birla Institute of Technology, Mesra — B.Tech, Computer Science

2023 – 2027 | CGPA: 8.56

## Technical Skills

- **Languages:** Python, Java, C, SQL, JavaScript, Dart
- **AI / ML:** TensorFlow, Scikit-learn, NLP, TF-IDF, K-Means Clustering, Neural Networks, RAG, Llama 3.1
- **Web & Mobile:** React.js, Flutter, Firebase, Google Cloud Platform (GCP), REST APIs
- **CS Fundamentals:** Data Structures, Algorithms, Object-Oriented Programming, DBMS, Operating Systems
- **Tools:** Git, GitHub, Chart.js, Twilio, Vercel, Canva

## Projects

- SaanchaarSetu – Interoperability Middleware [\[GitHub\]](#)

May 2026

*FastAPI · Kafka · Sentence Transformers · pgvector · Redis · Debezium · React*

  - Engineered a **bidirectional sync middleware** connecting **Karnataka’s Single Window System** to **40+ legacy department systems** (Factories, Labour, Fire Safety, BBMP) via a **3-tier ingestion pipeline** (webhook · polling · CDC via Debezium) — zero modifications to any source system.
  - Designed a **semantic schema mapping engine** using **Sentence Transformers + pgvector** (0.85 cosine threshold), with **PII scrubbing** before all AI inference, **Redis idempotency gating**, exponential-backoff retry with **Dead Letter Queue**, and a **hash-chained append-only audit log** — reducing cross-department data propagation from days to **under 5 seconds**.
- Digital Twin Market Engine — AI Product Launch Simulator [\[GitHub\]](#)

Feb. 2026

*React.js · TensorFlow.js · Groq API · Llama 3.1 · Chart.js*

  - Engineered an FMCG market simulation platform using **25,000 synthetic consumer personas** to model product launch outcomes before market entry.
  - Trained a neural network for demand prediction and applied **K-Means clustering** to segment customers by behavior, estimating churn rate and customer lifetime value (CLV).
  - Connected Groq API (Llama 3.1) to generate pricing recommendations from simulation output, replacing a manual analysis step that previously took several hours.
- Agentic RFP Automation Platform — Paint Industry [\[GitHub\]](#)

Oct. 2025 – Present

*React · RAG · NLP · Firebase · PDF.js*

  - Designed a **4-agent AI system** (Sales, Technical, Pricing, Orchestrator) to automate vendor RFP analysis and procurement pricing; cut response time from **3 hours to 7 seconds**.
  - Achieved **90% vendor-match accuracy** using RAG-based semantic search; parallel agent execution raised throughput by **26%** over a sequential baseline.
  - Shipped PDF/CSV export, an adaptive feedback loop that learns from reviewer corrections, and a usage analytics dashboard tracking 10+ procurement metrics.
- SaviHer — Women’s Safety App (Startup, Beta) [\[GitHub\]](#)

Sep. 2024 – Present

*Flutter · Dart · Python · Twilio · Firebase · GCP*

  - Founded and developed **SaviHer**, a cross-platform Flutter app with an SOS trigger that captures a photo and alerts emergency contacts in **under 2.5 seconds**.
  - Added a community volunteering module that cut average help-arrival time by **70%**, and a GCP-based geofencing layer (5 km radius) marking safe vs. unsafe zones.
  - Won **incubation at Bhamasha Techno Hub**; application submitted to iSTART for state government seed funding.

## Achievements

- Prize Winner (1,00,000) – AI FOR BHARAT HACKATHON by PAN IIT

May 2026

  - Recognized as winners for *SaanchaarSetu*, a bidirectional interoperability middleware connecting Karnataka’s Single Window System to 40+ legacy departments; evaluated by Joint Directors, Dept. of Industry & Commerce, Govt. of Karnataka, with **EY** as EODB knowledge partner.
- Algorand Foundation Hackathon — Finalist & Prize Winner

Dec. 2024

  - Advanced to Round 3 among international competitors; won **\$250** for a blockchain P2P solar energy trading platform built in 48 hours.
